Receive addressed image chunk

Validate frame, source, index and byte count

Write .part at index x 180

Flush / close; read back and compare bytes

Set chunk bit; commit record metadata

Write temporary record; verify; rename into place

All expected chunk bits set?

No

Partial receipt

Modes 1/2: chunk ACK
Modes 3/4: reply when queried

Yes

Verify image size, CRC32 and JPEG boundaries

Rename .part to .jpg; save complete state

Verification failure

Reset bitmap; request / expose retransmission

Success

Destination completion acknowledgement

Sender saves received status before reporting delivery

Any failed write or metadata commit prevents a successful receipt for that operation.
